

Stingrays

Read the paragraph below about Stingrays and complete the activity below.

Stingrays are related to sharks. They have no bones! Their bodies are made of cartilage (the same thing our ears are made of!). Most stingrays have eyes on the top of their bodies, and their mouths are on the bottom of their bodies. Stingrays breathe through gills.

Cow-nose stingrays at the St. Louis Aquarium

The picture to the right is the bottom side of a stingray. The two dots above the mouth are actually nostrils! The eyes are on the top side of the stingray, which you can't see from this drawing.

Draw in the nostrils, mouth, and gills on the blank stingray outline below.
